

UNIVERSITY OF JAMMU

NOTIFICATION (18/Oct/Adp/7/)

It is hereby notified for the information of all concerned that the Vice-Chancellor, in anticipation of the approval of the Competent Bodies, has been pleased to authorize the adoption of the revised Syllabi and Courses of Studies in Bachelor of Engineering (I.T. Engineering) for Semester I & II under the Choice Based Credit System as per the model curriculum of the AICTE (as given in the Annexure Pages 01 to 25) for the candidates of all (Govt./Pvt./UIET) Engineering Colleges affiliated with the University of Jammu for the Examinations to be held in the years indicated against each Semester as under :-

Branch

Semester

For the Examination to be held in the years

I.T

Semester-I

December 2018, 2019, 2020 and 2021

Semester-II

May 2019, 2020, 2021 and 2022

The Syllabi of the course is available on the University Website: www.jammuuniversity.in.

s/d-**DEAN ACADEMIC AFFAIRS**

CLASS: B.E. 1ST SEMESTER

BRANCH: COMMON TO ALL BRANCHES

COURSE TITLE: ENGINEERING MATHEMATICS-I CREDITS: 5

COURSE No.: BSC-101 DURATION EXAM.: 3 HRS

L T P MARKS
THEORY SESSIONAL
3 2 0 100 50

Course Outcomes: At the end of the course the Student will be able to

- CO 1 Learn the rules of nth derivative, to find maximum and minimum value of any function, to trace the curves.
- CO 2 Understand the concept of definite integrals and find arc length, area, surface area and volume of various curves.
- CO 3 Solve the differential equations of first order and higher order.
- CO 4 differentiate the concept of scalars, vectors, gradient, divergence and curl.
- CO 5 Evaluate the complex no. in polar form and understand the idea of hyperbolic functions

Detailed Syllabus

UNIT - I Differential Calculus - I

(07 hrs)

Leibnitz theorem (without proof), Partial differentiation, Euler's theorem on homogeneous functions, Asymptotes, Double points, curvature, Curve tracing in Cartesian, polar and parametric forms.

UNIT - II Differential Calculus - II

(07 hrs)

Rolle's theorem, Mean value theorem, Taylor's and Maclaurin's series with remainder, Indeterminate forms, Taylor's series in two variables, Maxima and Minima of functions of two variables, Method of Lagrange's multiplier's.

UNIT - III Integral Calculus

(08 hrs)

Definite integrals with important properties, differentiation under the integral sign, Gamma, Beta and error functions with simple problems, applications of definite integrals to find length, area, volume and surface area of revolutions, transformation of coordinates, double and triple integrals with simple problems.

UNIT -IV Vector Calculus

(06 hrs)

Scalar and vector product of vectors, Derivatives of vectors, Partial derivatives of vectors, Directional derivatives and Gradient, Divergence and Curl of a vector, Vector Integration; Gauss's Divergence theorem, Green's theorem, Stoke's theorem,

UNIT - V Complex Trigonometry

(05 hrs)

Hyperbolic functions of a complex variable, Inverse Hyperbolic functions, Logarithmic function of a complex variable; Summation of series by C+ iS method.

UNIT – VI Ordinary Differential Equations

(08 hrs)

Differential equations of first order and first degree: Exact and non-exact differential equations, Linear and Bernoulli's differential equations. Higher order linear differential equations: Complementary solution, particular integral and general solution of these equations, variation of parameters technique to find particular integral of second order differential equations, Cauchy's and Lagrange's differential equations. Applications of ordinary differential equations to simple Electrical and Mechanical Engg. Problems.

60/

BOOKS RECOMMENDED:

i. Calculus and Analytic Geometry

2. Differential Calculus

3. Vector Calculus

4. Higher Engineering Mathematics

5. Engineering Mathematics-I

Thomas and Finney, 9th Edition, Pearson, 2002.

S. Narayan and P.K. Mittal, S.Chand, New Delhi.

S. Narayan and P.K. Mittal, S. Chand, New Delhi.

B.S Grewal, Khanna Publishers, New Delhi

Dr. Bhopinder Singh

6.

NOTE: (I) There shall be total seven questions. Question no.1 is compulsory and short answer/ objective type .It will consists of 10 questions each of 01 mark (Total: 10 marks)

(II) There will be two questions from each unit. Attempt one question from each unit. Each question carry 15 marks.

4/

CLASS: B.E. 1ST SEMESTER

BRANCH: COMPUTER/E&C/IT ENGINEERING

COURSE TITLE: ENGINEERING PHYSICS CREDITS: 4

COURSE No.: BSC-102 DURATION EXAM.: 3 HRS

L T P MARKS
THEORY SESSIONAL
3 1 0 100 50

Course Outcomes (CO): At the end of the course the Student will be able to -

- CO 1 Understand the significance of Maxwell's equations as the basis of Electromagnetic theory.

 Gain the knowledge on the basic concepts of Quantum Mechanics and its applications.

 Acquire the concepts of different types of oscillations.
- CO 2 Assimilates the basic concepts of Semiconductor Physics.

 Get familiar with different aspects of applied optics & their applications.

 Understand the working principle of various lasers and optical fibres and their applications in various fields.

SECTION - A

Module -I: ELECTROMAGNETIC FIELDS AND WAVES

Concepts of Del Operator- gradient, divergence, curl and their physical significances, Displacement Current. Maxwell's equations in vacuum and non conducting medium, Electromagnetic wave propagation in free space (e.m wave equations for electric & magnetic fields for free space) & their solutions (plane wave solution) , velocity of E.M. waves, Relation between E_0 & B_0 , definition of Poynting vector, Poynting theorem.

8hrs, Weightage = 20%

Module -II: QUANTUM MECHANICS

Inadequacies of Classical Mechanics ,De-broglie's concept of Matter waves, Wave-packet (Wavegroup), Phase and Group velocity, Heisenberg's uncertainty Principle, Experimental illustration of Uncertainty principle using single slit, Wave-function definition, interpretation and significance of wave-function, Schrodinger's wave equation (Steady-state and Time dependent) for one- dimensional case, Concept of Operators and Expectation values, Applications of Schrodinger's equation (Time independent) to;

i) Particle in a one-dimensional box of infinite height, ii) Single step potential barrier, iii) Tunnel effect,

9hrs, Weightage = 20%

Module-III: OSCILLATIONS

Damped and Forced oscillations and their differential equations, Logarithmic decrement, Relaxation time & Quality factor, Ultrasonic waves and their production by Piezoelectric method and general applications.

4hrs, Weightage = 10%

SECTION - B

Module -IV: SEMICONDUCTOR PHYSICS

Structure of Atoms, Energy Band diagram, Metal, Insulator and Semiconductor, Intrinsic and Extrinsic semiconductors, Direct & Indirect semiconductors, Bond in semiconductor & effect of temperature on semiconductors, Hole & Electron description, Charge densities in semiconductor, Generation & Recombination of charge carrier, Law of mobility & conductivity, Current densities in semiconductors, Fermi levels, Mass action law, Drift & Diffusion currents, Hall effect, Hall co-efficient & its applications.

9hrs, Weightage = 20%

Module -V: APPLIED OPTICS

Interference in thin films (by reflection and transmission of light), Theory of Newton's rings by reflected light, Determination of wavelength and refractive index of monochromatic light by Newton's rings theory.

Fraunhoffer & Fresnel's diffractions, Fresnel's half period zones and rectilinear propagation of light, Fraunhoffer diffraction due to a single slit, Plane diffraction grating& its theory for secondary maxima & minima.

Unpolarised and polarised light, Double refraction phenomenon, Nicol Prism, Mathematical representation of elliptically and circularly polarized light, Quarter and Half wave plates.

7hrs, Weightage = 20%

Module VI: LASERS AND FIBRE OPTICS

Principal of Laser action, Einstein's co-efficients, Ruby & Co₂ Lasers, Holography, Propagation of Light in Optical fibres, Acceptance angle & acceptance cone, Numerical Aperture, Single mode & Multimode fibres, Characteristics and General applications of Lasers & Optical fibres.

5hrs, Weightage = 10%

TUTORIALS

S.No

TOPICS

- T-1 Numerical Problems pertaining to topics in Unit-I
- T-2 Numerical Problems based on topics in Unit-II
- T-3 Numerical Problems related to topics in Unit-III
- T-4 Numerical Problems based on topics in Unit- IV
- T-5 Numerical Problems associated with topics in Unit-V
- T-6 Numerical Problems related to topics in Unit-VI

NOTE: There shall be a total of eight questions, four from Each Section A & Section B selecting at least one question from each module. Each question carries 20 marks. Five questions will have to be attempted. Selecting at least two from each section. Use of Scientific calculator is allowed.

Books Recommended:

TITLE

- 1. Physics
- 2. Fundamentals of Electricity & Magnetism
- 3. Modern Physics
- 4. Modern Physics
- 5. Modern Physics
- 6. Sound
- 7. Basic Electronics
- 8. Semi conductor Physics and Devices: Basic Principles
- 9. Optics
- 10. Fibre Optics
- 11. Lasers
- 12. Modern Engineering Physics

COURSE No.: BSC-112 **DURATION EXAM.: 3 HRS**

L T	Т	P	MARKS				
			THEORY	PRACTICAL			
0	0	3	0	50			

Course Outcomes:

At the end of the course the Student will be able to-

CO-1 Gain knowledge about the scientific methods of measuring different physical

parameters based on the concepts of Physics.

CO-2 Develop the experimentation skills by displaying minimized measurement

CO-3 Demonstrate & improve the practical skills to use the appropriate physical concepts to obtain the solutions pertaining to different physics experiments.

CO-4 Acquire a sense of scientific temper infused with innovation & creativity.

Experiment No.

Title of Experiment

To find the frequency of A.C. mains using an electrical vibrator. Exp- I

To study the variation of magnetic field. Exp-II

To verify the Faraday's laws Exp-III

To find the co-efficient of self induction of a coil by Anderson's bridge using head phone. Exp-IV

To find the impedance of LCR circuit. Exp-V

To evaluate the value of Planck's constant using a photo-cell. Exp-VI

To study the characteristics of a Solar cell. Exp-VII

To draw the V-I characteristics of a P-N junction diode. Exp-VIII

To study the common base/ common emitter characteristics of PNP/NPN junction transistor. Exp-IX

To study the Zener diode characteristics. Exp-X

To find the dispersive power of a given prism using a spectrometer. Exp-XI

To find the wavelength of monochromatic light using Newton's rings apparatus. Exp-XII

To determine the wavelength of sodium light using a plane transmission grating. Exp-XIII

To determine the specific rotation of sugar/glucose using Laurent's Half shade Polarimeter. Exp-XIV

To find the wavelength of He-Ne laser. Exp-XV

NOTE: A MINIMUM OF EIGHT EXPERIMENTS IS TO BE PERFORMED COVERING THE DIVERSE ASPECTS OF **ENGINEERING PHYSICS.**

COURSE TITLE: COMPUTER PROGRAMMING CREDITS: 4

COURSE No.: ESC-101 DURATION EXAM.: 3 HRS

L T P MARKS
THEORY SESSIONAL
3 1 0 100 50

Course Outcomes: At the end of the course the student will be able to -

- CO 1 Understand, analyze and implement software development tools like algorithm, pseudo codes and flow charts.
- CO 2 Understand the use of loops and decision making statements to solve the problems.
- CO 3 Apply different operations on arrays and user-defined functions to solve real-time problems.
- CO 4 Analyze the operation of pointers, structures and unions.
- CO 5 Implement file operations in C programming for a given application.

<u>Detailed Syllabus</u> <u>Section-A</u>

Introduction to Programming (Flow chart/pseudocode, compilation etc.

Evolution of programming languages, structured programming, the compilation process, object code, source code, executable code, operating systems, fundamentals of algorithms, flow charts.

Introduction to C, Data Types, Constants, Variables, Expressions, Statements, Operators, Data Input and Output.

Character set, Identifiers, Keywords, Data Types, Constant and Variables, Statements, Expressions, Operators, Precedence of operators, Input-output Assignments. (10 hrs)

Control Statements, Storage Classes, Library Functions.

Control structures, Decision making and Branching, Decision making & looping.

Storage Classes: Types of storage class, Scoping rules.

Standard Library Functions, advantages and use of various library functions (I/O functions, String, Character, Mathematics, Time and Date, functions) (10 hrs)

Section-B

Functions, Arrays, Recursion, User Defined Data Types, Structures, Unions, Passing Structure to Functions.

User defined and standard functions, Formal and Actual arguments, Functions category, function prototypes, parameter passing, Call-by-value, Call-by-reference, Nested functions.

One dimensional Array, Multidimensional Array declaration and their applications, String Manipulation, Recursion, Passing array to a function. Declaration of structures, declaration of unions, pointer to structure & unions.

(10hrs)

Sol

Pointers, Operation on Pointers, Passing Pointers to Functions, Data Files – Opening, Closing, Creating Data Files

Pointer variable and its importance, Pointer Arithmetic, passing parameters by reference, pointer to pointer, pointers to functions, Dangling pointer, dynamic memory allocation.

Console input output functions, Disk input output functions, opening closing and creating Data files.

(10 hrs)

NOTE: There shall be total eight questions, four from each section. Five questions will have to be attempted selecting at least two from each section. Use of calculator is allowed.

BOOKS RECOMMENDED:

- 1. C How to Program, 7/e
- 2. Programming With C
- 3. Programming With C
- 4. C The Complete Reference
- 5. Let us C
- 6. Programming in C : A Practical Approach

- Paul J. Deitel
- Byron Gottfried.

0	0	2	0	50			

Laboratory Outcomes: After Completion of this course the student will be able to -

- CO 1 Read, understand and trace the execution of programs written in C language.
- CO 2 Exercise conditional and iterative statements to write C programs.
- CO 3 Implement Programs using operators, arrays and pointers to access functions.
- CO 4 Write programs that perform operations using derived data types and files.

Lab Experiments

Experiment 1: Problem solving using computers: Familiarization with programming Environment.

Experiment 2: Variable types and type conversions: Simple computational problems using arithmetic expressions.

Experiment 3: Branching and logical expressions: Problems involving if-then-else Structures.

Experiment 4: Loops, while and for loops: Iterative problems e.g., sum of series

Experiment 5: 1D Arrays: searching, sorting: 1D Array manipulation

Experiment 6: 2D arrays and Strings, memory structure: Matrix problems, String Operations

Experiment 7: Functions, call by value: Simple functions

Experiment 8: Recursion, structure of recursive calls: Recursive functions

Experiment 9: Pointers, structures and dynamic memory allocation: Pointers and Structures

Experiment 10: File handling: File creation, writing and reading a file, File manipulation Operations

COURSE TITLE: ENGINEERING GRAPHICS CREDITS: 2.5

COURSE No.: ESC-102 DURATION EXAM.: 3 HRS

L T		P	MARKS				
			THEORY	SESSIONAL			
1	0	3	100	50			

Course Outcomes (COs): At the end of the course the Student will be able to-

- CO 1 Draw orthographic projections of sections.
- CO 2 Use architectural and engineering scales with accuracy.
- CO 3 Work with zeal of office practices and standards.
- CO 4 Convert sketches to engineered drawing.
- CO 5 Perform auto cad two dimensional drawing.

SECTION A

Engineering Curves: Conventional lines and signs used in Engineering Drawing, Dimension and Tolerances, Printing and Lettering, Curves used in Engineering Practice: Cycloidals, Involutes, Spirals and Hellices,

Loci-Conic section: Terms used in conic-conic curves curved defined as Loci, Practical application of conics,

Ellipse, Parabola, Hyperbola

Projection of Planes: Projections of a plane w.r.t. the principle planes in simple and inclined positions. Rotation method and the Auxiliary plane method. Space relation of a plane. To locate a point on a plane given its projections. Parallel relation of planes. Projection of planes inclined to different principal plane.

Projection of Solids: Classification and main features-Prisms and Pyramids. Projection of solids inclined to both the reference planes by (1) Rotation Method, and (II) Auxiliary plane method. Projection of solids in combination (Co-axial) in simple and inclined positions.

Sectioning of Solids: Object of sectioning, Types of cutting planes, True shape of section, Auxiliary views of sections of multiple co-axial solids in simple and titled conditions.

SECTION B

Interpenetration of Solids and Intersection of Surface: Intersection of geometrical solids/hollow sections, Tracing of lines of intersection by line method and by section method.

Development of Surfaces: Classification of surfaces, Methods of development-Straight line method and Radial line method, Development of solids and hollow sections in full or part development of transition pieces. To draw projections from given development.

Isometric Projection: Isometric scale, Isometric axes and Isometric planes, Isometric projection of solids and simple machine blocks.

Overview of Computer Graphics covering:

Listing the computer technologies that impact on graphical communication, Demonstrating knowledge of the theory of CAD software [such as: The Menu System, Toolbars (Standard, Object Properties, Draw, Modify and Dimension), Drawing Area (Background, Crosshairs, Coordinate System), Dialog boxes and windows, Shortcut menus (Button Bars), The Command Line (where applicable), The Status Bar, Different methods of zoom as used in CAD, Select and erase objects.

Orthographic Projections: Orthographic projection of simple blocks (First & Third angles), to draw the third view from given two views. Missing lines in projection.

CLASS: B.E. 1ST SEMESTER

BRANCH: COMPUTER/ELECTRICAL/E&C/IT ENGINEERING

COURSE TITLE: MENTORING & PROFESSIONAL DEVELOPMENT CREDIT: Non-Credit

COURSE No.: NCC-101 L T F

DURATION EXAM: 3 HRS 0 0 2

Detailed Syllabus

- Mentoring: Meaning and importance of mentoring, Stress management, Conflict management, Time management .Role of mentor in: mitigating stress and conflict in time management, in confidence building, in overall personality development, in developing life skills and emotional intelligence. (7)
- 2. Meaning and components of personality, Personality development models Johari Window and Transactional analysis, Motivation meaning and approaches, Leadership meaning and style.

Note: -

- i. There shall be a case study, viva –voce of the students by internal examiner consisting of 40 marks each.
- ii. There will be an Internal MCQ/Objective type Questions based examination of 40 marks.
- iii. Evaluation: Satisfactory>= 40%: Unsatisfactory<40%.

CLASS: B.E. 1ST SEMESTER

BRANCH: COMPUTER/ELECTRICAL/E&C/IT ENGINEERING

COURSE TITLE: ENVIRONMENTAL SCIENCES CREDIT: Non-Credit

COURSE No.: NCC-102

DURATION EXAM: 3 HRS 0 0 2

Detailed Syllabus

1. Introduction

Definition and scope and importance of multidisciplinary nature of environment. Need for public awareness. (2)

2. Natural Resources

Natural Resources and associated problems, use and over exploitation. (2)

3. Ecosystems

Concept of Ecosystem, Structure, interrelationship, producers, consumers and decomposers, biodiversity and importance. (2)

4. Environmental Pollution

Definition, Causes, effects and control measures of air pollution, Water pollution, Soil pollution, Noise pollution, Thermal pollution, nuclear hazards. Solid waste Management: Causes, effects and control measure of urban and industrial wastes. Disaster Management: Floods, earthquake, cyclone and landslides.

(4)

Social Issues

Water conservation, rain water harvesting, Climate change, global warming, acid rain. Environment Protection Act: Air (Prevention and Control of Pollution) Act, Water (Prevention and control of pollution) Act, Wildlife Protection Act, Forest Conservation Act. (3)

6. Human Population and the Environment

Population growth, Population explosion. Environment and human health, Human Rights. Role of Information Technology in Environment and human health. (2)

Note:

- i. There will be an Internal MCQ/Objective type Questions based examination of 40 marks.
- ii. Evaluation: Satisfactory>= 40%: Unsatisfactory<40%.
- iii. A field visit of students to make them aware about the environmental issues is compulsory.

BOOKS RECOMMENDED:

Environmental Sciences - Basak, A
 Environmental Studies - Benny Joseph

3. Environment Pollution Control Engineering - Rao, C.S.

4. Perspectives in Environmental Studies - Kaushik, A.

5. Elements of Environment Science & Engineering - Meenakshi.

6. Elements of Environment Engineering - Duggal.

- CO 3 Solve the differential equations of first order and higher order.
- CO 4 differentiate the concept of scalars, vectors, gradient, divergence and curl.
- CO 5 Evaluate the complex no. in polar form and understand the idea of hyperbolic functions

Detailed Syllabus

UNIT- I Introduction to infinite series & sequences

(06 hrs)

Convergence and divergence of a series, p-test, comparison test, Cauchy's root test, D' Alembert Ratio Test, Raabe's Test, Guass test, Logarithmic test, Leibnitz test on alternating series.

UNIT- II Fourier series and Power Series Solutions of Second order O.d.e

(10 hrs)

- (i) Fourier series: Euler's formula, sufficient conditions for a Fourier expansion, functions having points of discontinuity, change of intervals. Odd and even functions, Fourier expansion of Odd and even periodic functions, half range series, typical wave forms, Parseval's formula, complex form of Fourier -series.
- (ii) Power series: Analytic function, ordinary point, singular point, regular and irregular singular points of o.d.e. Y'' + P(x) Y' + Q(x) Y=0, Series solution of differential equations about an ordinary point, Frobenius series solution about a regular singular point. Examples of Legendre and Bessel's differential equations.

Unit - III First Order partial differential equations

(05 hrs)

Formation of p.d.e, First order linear p.d.e, Non-Linear p.d.e. of 1st order, solution by Charpit's method, Four Standard forms of non-linear p.d.e with reference to Charpit's technique: f(p,q) = 0, f(z,p,q) = 0, f(x,p) = g(y,q) and Clauraut's form.

Unit - IV Higher Order Linear p.d.e

(07 hrs)

Homogenous and Non-homogenous higher order linear partial differential with constant coefficients Rules for finding P.I and C.F, Non-Linear equations of 2nd order. Application of p.d.e, method of separation of variables to solve equations of vibrations of strings (or one dim wave equation), one dim heat flow equations, Laplace equations.

Unit – V Matrices (08 hrs)

Introduction, Rank of matrix, Elementary transformations, Elementary matrices, Inverse using elementary transformation, Normal form of a matrix, Linear dependence and independence of vectors, consistency of linear system of equations, Guass Jordan method, Gauss elimination method, Eigen values and Eigen vector, Properties of Eigen value, Cayley Hamilton Theorem, Reduction to diagonal form, Reduction of quadratic form to canonical form.

Cy

Unit - VI Vector Spaces

Definition, Linear transformation, basis, dimensions of a vector space, Range and Kernel of a linear transformation, Rank, Nullity, Rank-Nullity theorem, Matrix associated with a linear transformation.

NOTE: (I) There shall be total seven questions. Question no.1 is compulsory and short answer/ objective type. It will consist of 10 questions each of 1 mark (Total: 10 marks)

(II) There will be two questions from each unit. Attempt one question from each unit. Each question carry 15 marks.

BOOKS RECOMMENDED:

1 Advanced Engineering Mathematics

2. Higher Engineering Mathematics

3. Engineering Mathematics -II

4. Partial differential equations

5. Linear Algebra

Course Outcomes: At the end of the course the student will be able to -

CO 1 Know the importance of stereochemistry in organic compound and apply the knowledge gain in this course to the variety of chemical compounds.

CO 2 Summarize the chemical structure, molecular properties, vulcanization process and application of major type of rubber.

- CO 3 The different polymerisation processes used to make thermoplastic and thermosetting plastics.
- **CO 4** Through Spectroscopy, One could acquire Knowledge about the identification of newly synthesized products.
- CO 5 Explain the air quality, emission, pollution control and Environmental health.
- CO 6 Define basic knowledge on cement, its production, characteristics, properties etc.
- CO 7 Recognise the common physical, chemical process encountered in treatment process of water.

SECTION - A

Module - I

STEREOCHEMISTRY AND DRUGS

Optical isomerism, enantiomerism and diastereoisomerism, racemisation, Methods for resolution of racemic mixture, asymmetric synthesis.

Definition and synthesis of a drug, structure and applications of following drugs:-

- (e) Antipyretic
- (f) Narcotics
- (g) Tranquilizers
- (h) Antibiotics

6hrs

Module - II

PLASTICS, RUBBER AND PAINTS

Plastics:

Introduction, importance and uses of plastics, classification of plastics, moulding constituents of a plastic, moulding of plastic into articles (compression, injection, transfer and extraction mouldings).

Rubber:

Introduction, types of rubber, treatment of latex, vulcanization of rubber.

Paints:

Introduction, requisites of a good paint, constituents of a paint, manufacture of paint, a brief idea of manufacture, properties and uses of white pigments such as white lead and lithopone

Say

Module - III SPECTROSCOPIC TECHNIQUES AND APPLICATIONS

Principle, Laws of absorption, Band nature of UV Spectrum, types of electronic UV Spectroscopy:

transitions, applications.

Principle, molecular vibrations, applications. IR Spectroscopy:

NMR Spectroscope: Principle and applications.

8hrs

SECTION - B

Module - IV

ENVIRONMENTAL SCIENCE

Concepts of Environmental Chemistry, Segments of environment (a brief idea about atmosphere, hydrosphere and Lithosphere).

Air Pollution: Types and control of Air Pollution.

Water Pollution: Classification and control of Water Pollution.

Chemical Toxicology: Biochemical effects of Pb, Hg, As, Zn & CN.

8hrs

Module - V

ALLOYS AND CEMENT

Alloys: Introduction, purpose of making alloys, preparation of alloys, classification of alloys (Ferrous & Non-Ferrous alloys), alloy steels and copper alloys (Brass & Bronze).

Cement & its types, manufacture of Portland cement, setting and hardening of cement.

5hrs

Module - VI

WATER TREATMENT

Introduction, softening of water by Lime-Soda, zeolite & ion-exchange processes, priming and foaming, sludge & scale formation, determination of hardness of water by EDTA method, Numericals on hardness and softening of water.

6hrs

NOTE: The paper will be divided into two sections. There shall be a total of eight questions, four from each section A and B, selecting at least one question from each module. Each question carries 20 marks. Five guestions will have to be attempted, selecting at least two guestions from each section. Use of calculator is allowed.

Books Recommended:

Course Outcomes: At the end of the course the student will be able to -

- CO 1 Capability to visualize and understand chemical engineering unit, operations related to fluid and practical mechanics and mass transfer.
- CO 2 To provide an overview of preparation and identification of organic compound.
- CO 3 This course relies on quantitative analysis and makes use of simple equation to illustrate the concept involved.
- CO 4 Handling different types of instruments for analysis of materials, using small quantity of material involved for quick and accurate results.
- CO 5 Estimation of total hardness of water by EDTA complex metric method.
- CO 6 Detection of various elements and functional groups in unknown organic compound.
- CO 7 To determine the alkali content in antacid tablets.

S. No.	TITLE OF EXPERIMENT				
1.	Determine the percentage of CaCO ₃ in precipitated chalk. You are provided with IN HCI and 0.IN NaOH.				
2.	To analyse the given antacid tablets.				
3.					
4. Determine Volumetrically the percentage of Cu in a sample of CuSO ₄ crysta Z gms of which have been dissolved per litre, provided 0.IN Na ₂ S ₂ O ₃ .					
5.					
6.	Determine the surface tension of a unknown liquid Stalagmometer.				
7.	To prepare a pure and dry sample of Aspirin.				
8.	To prepare a pure and dry sample of Glucosazone.				
9.	Determine the method of purification of organic compounds by coloumn chromatography.				
10.	Organic Analysis: Identify the following organic compounds (preparation of at least one derivative).				
11.	Determine the total hardness of a sample of water by complexometric method (using EDTA).				
12.	Determine the percentage of calcium oxide in cement.				

Note:- A minimum of ten experiments to be performed.

BOOKS RECOMMENDED:-

CLASS: B.E. 2ND SEMESTER

BRANCH: COMPUTER/E&C/ELECTRICAL/I.T ENGINEERING

CREDITS: 4 COURSE TITLE: BASIC ELECTRICAL ENGINEERING

COURSE No.: ESC-203

DURATION EXAM.: 3 HRS

MARKS L SESSIONAL THEORY 50 100 3 1

Course Outcomes:

At the end of this course, students will demonstrate the ability

- To understand and analyse basic electric and magnetic circuits.
- To study the working principles of electrical machines.
- To introduce the components of low-voltage electrical installations.

Section-A

Module 1: DC Circuits

(8 hours)

Electrical circuit elements (R, L and C), voltage and current sources, Kirchoff current and voltage laws, analysis of simple circuits with dc excitation. Mesh and Nodal analysis, Superposition, Maximum Power Transfer theorem, Thevenin and Norton Theorems.

Module 2: AC Circuits

(8 hours)

Representation of sinusoidal waveforms, peak and rms values, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel) and resonance.

Module 3: Three-phase Circuits

Concept of three phase voltage, voltage and current relations in star and delta connections. Measurement of power in three-phase balanced circuits.

Section-B

Module 4: Transformers

(6 hours)

Principle of operation, ideal and practical transformer(no-load & on-load pahsor diagrams), equivalent circuit, losses in transformers, Transformer test (open circuit & short circuit), regulation and efficiency.

Module 5: Electrical Machines

DC Machines- Principle of operation, emf equation, torque production. AC Machines- Three-phase induction motor, principle of operation, slip and rotor frequency. Synchronous machines- Principle of operation and emf equation.

Module 6: Electrical Installations

(6 hours)

Components of LT Switchgear: Switch Fuse Unit (SFU), MCB, ELCB, MCCB, Types of Wires and Cables, Earthing. Types of Batteries, Important Characteristics for Batteries. Elementary calculations for energy consumption, power factor improvement and battery backup.

Text / References:

- 1. D. P. Kothari and I. J. Nagrath, "Basic Electrical Engineering", Tata McGraw Hill.
- 2. D. C. Kulshreshtha, "Basic Electrical Engineering", McGraw Hill.
- 3. L. S. Bobrow, "Fundamentals of Electrical Engineering", Oxford University Press.

4. E. Hughes, "Electrical and Electronics Technology", Pearson.

5. V. D. Toro, "Electrical Engineering Fundamentals", Prentice Hall India.

- 1. The question paper shall comprise of total eight questions, four from each section and atleast NOTE: one question from each module.
 - 2. Students are required to attempt five questions selecting at least two questions from each section. Use of scientific calculator is allowed.

CLASS: B.E. 2ND SEMESTER

0 0 2 0 50

Laboratory Outcomes: The students are expected to

- Get an exposure to common electrical components and their ratings.
- Make electrical connections by wires of appropriate ratings.
- Understand the usage of common electrical measuring instruments.
- Understand the basic characteristics of transformers and electrical machines.

List of Laboratory Experiments/Demonstrations:

- 1. Basic safety precautions. Introduction and use of measuring instruments voltmeter, Ammeter, multi-meter, oscilloscope. Components-Resistors, capacitors and inductors.
- 2. Verification of Kirchoff's Laws.
- 3. Verification of Superposition Theorem.
- 4. Verification of Thevenin's Theorem.
- 5. Verification of Norton Theorem.
- 6. Verification of Maximum Power Transfer Theorem.
- 7. Measurement of current in various branches of RLC series-parallel circuit.
- 8. Measurement of three-phase power using Wattmeter.
- 9. Study of single phase transformers. Determination of Polarity Test of given single phase transformer.
- 10. To perform open and short circuit test on single phase transformer.
- 11. Demonstration of cut-out sections of machines: dc machine and ac machines.
- 12. Study of wires, cables, fuses and MCBs.
- 13. To perform calculations for energy consumption.

Note: A minimum of eight experiments is to performed by each student.

CREDITS: 2 COURSE TITLE: COMMUNICATION SKILLS

COURSE No.: HMC-201

DURATION EXAM: 3 HRS

L	T P		MARKS				
			THEORY	SESSIONAL			
2	0	0	50	25			

COURSE OUTCOME OF COMMUNICATION SKILLS

The student would be able to:

1. Acquire proficiency in reading, speaking and writing skills.

2. Equip themselves with grammatical and communicative competence.

3. Adept in communication skills required for the competence in present scenario.

4. Acquire proficiency in listening skills and professional etiquettes.

5. Enhance their linguistic competence for Group Discussions and public speaking.

SECTION-A

UNIT I

Writing Practice: Comprehension, Notices, Memos, Précis writing, Types of Letter- Enquiry letter, Reply to enquiry, Claims letter, Adjustment and sales letter, Job letter; E-mail writing.

5 hrs

UNIT II

Introduction to grammar: Use of phrase and clauses in sentences, use of proper punctuationConcept of word formation, Synonyms, Antonyms, Prefix, Suffix; Articles, Prepositions, Clichés, Subject-verb 6 hrs Agreement.

SECTION-B

UNITIII

Communication: Introduction, Elements of Business Communication, Media of verbal communication (oral & written), Barriers of Communication, Guidelines to improve Business communication.

5 hrs

UNIT IV

Professional Etiquettes- Meaning and types. Listening skills: Process of listening, types of listening, techniques to improve listening ability, skills of effective listening, Group Discussion-Advantages, Purpose, Group Dynamics, and Guidelines for Effective Group discussion.

5 hrs

UNIT V

Speaking Skills- Skills of Effective speaking, Components of Effective talk and body language; Interviews-Meaning, Types of interview, tips for giving an interview and handling questions. Meeting skills: purpose of meeting- procedures, notices, agenda, venue of meeting; minutes of meeting. Brain Storming-Purpose and techniques.

5 hrs

NOTE: The question paper shall consist of two questions from each unit (total 10 questions). Students have to attempt one question from each unit (total no. of questions to be attempted shall be five) i.e there shall be internal choice within each unit. Students have to attempt two questions from Section A and three questions from section B. Each question carries equal marks (10 marks).

Low

BOOKS RECOMMENDED

- Communication Skills by Dr. Nageshwar Rao & Dr. Rajendra Prasad.
- Functional Aspects of Communication Skills by Dr. Prajapati Prasad, Published by S.K Kataria &Sons.

Course Outcomes:-

At the end of the course, the student will be able to -

- CO 1 Understanding different manufacturing techniques and their relative Advantages/disadvantages with respect to different applications.
- CO 2 Selection of a suitable technique for meeting a specific fabrication need.
- CO 3 Acquire a minimum practical skill with respect to the different manufacturing methods and develop the confidence to design& fabricate small components for their project work and also to participate in various national and international technical competitions.
- CO 4 Introduction to different manufacturing methods in different fields of engineering.
- CO 5 Practical exposure to different fabrication techniques
- CO 6 Creation of simple components using different materials. Exposure to some of the advanced and latest manufacturing techniques being employed in the industry.

Shop Practice:-

Unit I CARPENTRY:-

- 1. Different joints :- a) Middle/cross lap joint
 - b) Mortise and Tenon T -joint
- 2. Pattern making of open bearing

Unit II CASTING:-

- 1. Casting of open bearing (single piece pattern)
- 2. Casting of split piece pattern

Unit III SMITHY:-

- 1. Cubical block from a cylindrical section
- 2. L shaped hook from cylindrical section

Unit IV WELDING:-

- 1. Preparation of single V Butt joint by gas and arc welding processes
- 2. Preparation of Double V-Butt joint, T-joint and corner joint by gas and arc welding

Unit V FITTING:-

- 1. Assembly of snap fitting of MS-Flat pieces (Male and Female)
- 2. Assembly and fitting of two L- shaped rectangular MS flat pieces

Unit VI MACHINE SHOP:-

- 1. Operation like turning, step turning on MS round
- 2. Operation like taper turning, Knurling on MS round
- 3. Introduction to CNC machines

Books Recommended:-

- · Workshop Technology by Hajra and Chowdhary
- · Manufacturing Technology Vol I & II by Rao. P.N
- Manufacturing Technology by Gowri .P. Hariharan and A. Suresh Babu

	COURSE OUTCOMES						
At the end of	At the end of the course the student will be able to: -						
CO1	CO1 Understand the basic architecture and operational concepts in designing CPU.						
CO2	Analyze various component units (ALU& CU) and Organization of CPU.						
CO3	Analyze various memories management techniques like Virtual Memory and Cache						
	Memory.						
CO4	Apply the concepts of Parallel Processing in designing high performance processors						
CO5	Analyze the working of different types of Processors						

Detailed Syllabus Section-A

Introduction: - Basic structure of Computers, stored programme concept, Basic Operational concepts, Functional Units, Machine language, concept of memory locations, addresses, addressing modes. **(6Hrs)**

Processing and execution: - Processing unit, execution of instructions, control step sequence, different types of instruction, ALU Design, Arithmetic Processes, Control Unit Design, Hardwired& Micro programmed ControlUnit.

(6Hrs)

CPU: General Register Organization, Stack Organization, Instruction format, RISC, CISC.

(4Hrs)

Input output organization: - I/O SystemsóProgrammed Control, Interrupt controlled &DMAData Transfer Schemes, I/OProcessors.Architecture(IOP). (6Hrs)

Section-B

Memory Management: - Memory organization, Characteristics of memory size, Access time, Read/write cycle time, Sequential and Random access semiconductor memories, Virtual memory and its implementation, Cache memory and its types- Split and Unified, levelsofCaches. **(8Hrs)**

Parallel processing – Basic Concepts, Types of parallel Processors, Pipelined processors, Pipelined Structures, PipelineHazards. (6 Hrs)

Introduction to Vector Processors, Array Processors, Multicore processors.

(6Hrs)

)

Books Recommended:

1.	Computer Architecture & Organization	John P. Hayes (McGraw Hill)
2.	Computer System Architecture	Morris Mano
3.	Computer System Architecture	V.K. Jain
3.	Computer Organization	Carl V. Hamacher
4.	Digital Electronic	Malvino Brown.

COURSE NO: PIT-302

THEORY SESSIONAL

DURATION OF EXAM: 3 HOURS 3 1 0 100 50

COURSE OUTCOMES At the end of the course the student will be able to: -					
CO1 Understand the difference between Structured Programming approach and Object Oriented Programming approach.					
CO2	Acquire knowledge in developing object oriented solutions to problems by learning the usage of Data Abstraction, Encapsulation, and Inheritance.				
CO3	Design and implement programs using Classes and Objects.				
CO4	Understand the concept of Inheritance, Polymorphism, Operator Overloading and Function Overloading.				
CO5	Apply the concepts of Object Oriented Programming in Templates & Exception Handling, File related operations and in real-time application development.				

Detailed Syllabus Section- A

Review of Pointers: Passing parameters, Array of PointersCharacterPointers.

(2Hrs)

Programming Techniques: Unstructured, Procedural, Modular. Introduction to Objects, Object & Cohesion (3Hrs)

Overview of C++, Object Oriented programming, Encapsulation, Polymorphism, Inheritance, Console I/O, C++Comments. (3Hrs)

Classes Objects:, Metaclass, Abstract class, Public and Private variables, Constructor and Destructor Functions, Constructors taking parameters, Object Pointers, In-Line Functions, Automatic In lining, Friend Functions, This Pointer, New & Delete, Arrayof Objects. (12Hrs)

Section- B

Overloading, Overloading Constructor Functions, Operator overloading, Overloading Binary and Unary Operators, Overloading Relational &Logical Operators. (8Hrs)

Inheritance, Using Protected Members, Multiple Inheritance, Virtual Base Classes, Introduction to Virtual Functions.

Templates & Exception Handling: Use of Templates, Function Templates, Class Templates, Handling Exception. (4Hrs)

File Handling: I/O Basics, Ifstream, Ofstream, IFstream, Open(), Close(), EOF(), Binary I/O, Get(), Put(), Read(), Write(), Random Access, Seekg(), Seekp(), Tellg(), Tellp(). (4Hrs)

Books Recommended:

1	Programming in C++	Balaguruswamy
2	C++ the Complete Reference	Herbert Schildt.
3	Mastering C++	K.R. Venugopal& T. Ravishankar& Raj Kumar.
4	Turbo C++	Robert Lafore.

<u>NOTE</u>: There will be eight questions of 20 marks each, four from each section. Students are required to attempt five questions selecting at least two questions from each section. Use of Calculator is allowed

COURSE OUTCOMES		
At the end of the course the student will be able to: -		
CO1	Understand the principles of semiconductor devices and their applications.	
CO2	Understand the characteristics of transistors and perform analysis on DC and AC load line.	
CO3	Attain basic knowledge of FETs and MOSFETs.	
CO4	Perform analysis of single stage and multistage amplifiers.	
CO5	Learn the basics of h- parameters.	

Detailed Syllabus

Section-A

Semiconductor Devices: PN junction diode, Volt-ampere characteristics, diode capacitance, static and dynamic resistances, Zener diode, tunnel diode, schottky diode, photodiode, LED-their characteristics and analysis, Half wave, full wave and bridge rectifier with necessary derivations, Voltage regulation, Capacitor filter, Inductor filter, LC filter, Bleeder resistor, numerical problems. (11 Hrs)

Transistors: Transistor and its characteristics in CE,CB,CC mode, Ebers-Moll model, generalized transistor equation, Base width modulation, types of biasing circuits, operating point and loadline. (10Hrs)

Section-B

FET: Introduction, Construction and operation of JFET, Characteristics, JFET parameters and their relationship. MOSFET- depletion and enhancement type- characteristics and operation. **(8Hrs)**

Amplifiers: Principle of operation and classification of amplifiers (Single stage and multistage amplifiers) analysis and frequency response of amplifiers, multistage amplifiers- LC, RC, DC and transformer coupled

(9 Hrs)

Hybrid Parameters: Introduction, Two port network, Determination of h-parameters, h-parameter equivalent circuit, hybrid model for CE, CB, CC configuration with necessary derivations. (4Hrs)

BOOKS RECOMMENDED:

1. Integrated Electronics Millman&Halkias

2. Basic Electronics J.B Gupta

3. Electronics Devices Bolystead

<u>NOTE</u>: There will be eight questions of 20 marks each, four from each section. Students are required to attempt five questions selecting at least two questions from each section. Use of Calculator is allowed.

CO1	Understand and apply fundamental aspects of graph theory tools in solving practical problems	
CO2	Evaluate the basics concepts of groups, its examples and related results.	
CO3	Create graphs and trees using different transversal methods.	
CO4	Improve proof of writing skills	

Detailed Syllabus Section-A

Algebraic System

Definition, examples and related basic theorems on Groups, Sub groups, Cosets& Normal Subgroups, Logic operators, truth tables (10 Hrs)

Graph Theory

Basic terminology, multi graphs and weighted graphs, connectivity; walk, trail andpath, circuits & Cycles, shortest path in weighted graphs, Algorithm of shortestpath, Hamiltonian and Eulerian paths and circuits, Eulerian trail & circuit, Euleriangraphs, Hamiltonian cycle, Hamiltonian graph, Konisberg Bridge problem.

(12 Hrs)

Section-B

Planar Graph

Introduction to Planar Graph, maps and region, Eulerøs formula. Kuratowskiøs graphs and Kuratowskiøs theorem. (05Hrs)

Trees and Cut Sets

Trees, Rooted Trees, path lengths in rooted trees, prefix codes binary search trees, spanning trees and cut sets and circuits. (05Hrs)

Books Recommended:

1.	Discrete Mathematics and its Applications, Tata McGraw ó Hill	Kenneth H. Rosen
2.	Discrete Mathematics with Applications,4th edition, Wadsworth Publishing Co. Inc.	Susanna S. Epp
3.	Elements of Discrete Mathematics A Computer Oriented Approach, 3rd Edition by, Tata McGraw ó Hill	C L Liu and D P Mohapatra

At the end	of the course the student will be able to: -	
CO1	Understand how organizations functions	
CO2	Understand the various behaviour of the organizations and their processes to compete in the business world.	
CO3	Understand basic management concepts and enhance the leadership skills of the managers.	
CO4	Understand appropriate intervention in directing employees towards achieving organisationalgoal.	

Detailed Syllabus Section-A

Concept and Evolution of Management

Management: Meaning, Characteristics, Functions and Scope. Classical Theory of management: Henry Fayol Administrative Management Theory and Taylor Scientific Management Theory. (6Hrs)

Planning

Characteristics, Significance and Barriers to effective PlanningProcess of Planning and its types. Steps taken to make Planning effective. (6Hrs)

Decision Making

Meaning, Characteristics, Importance & Process of Decision Making. Types of Decisions, Techniques for improving Group Decision Making. Limitations of Decision Making. (6Hrs)

Section – B

Organizing

Forms of Organization: - Formal and Informal. Departmentation and its bases.

Forms of organization structure: -Line, Line &Staff organization structure.

(6Hrs)

Directing and Leading

Direction: - Importance and Principles of Direction. Leadership- characteristics, Functions, Importance. Styles of Leadership- Autocratic, articipative and Free ó Rein. Communication: Concept, Process Types & Barriers. (6Hrs)

Controlling and Coordinating

Controlling: - Concept, Importance, Process. Types and Stages of Control. Co-ordinating: Importance. . and Principles, External & Internal Co-ordination, Techniques of Effective Coordination. (6Hrs)

Books Recommended:

1. Essentials of Management Koontz, H & Weihrich, H., McGrawHill Int.

2. Principles & Practice of Management Prasad, L.M.

3. Management & organization Allen, McGraw Hill Int.

4.Principles& Functions of Management Jain, J.K PrateekPrak

5. Organization and Management Agrawal, R.D.

0 0 2 50

COURSE OUTCOMES After Completion of this course the student will be able to: -	
CO1	Plot forward and reverse characteristics of PN junction diode and Zener diode.
CO2	Fabricate half and full wave rectifiers and evaluate their performance parameters
CO3	Plot the characteristics of transistor for various configurations using trainer kit.
CO4	Plot the characteristics of FET using trainer kit.

Lab Experiments:

Experiment 1	Familiarization with various Electronic Components- resistors, capacitors,
	Transistors, diodes, IC, Transformers
Experiment 2	Diode characteristics (Forward and reverse)
Experiment 3	Diode as a Rectifier with capacitor filter(Half & Full Bridge)
Experiment 4	Zener diode characteristics & Zener diode as voltage regulator
Experiment 5	Characteristics of Tunnel Diode, LED s, photodiode.
Experiment 6	Characteristics of transistors in CB, CE & CC mode.
Experiment 7	Design of self bias circuit using BJT.
Experiment 8	Characteristics of JFET, MOSFET.
Experiment 9	Determination of h-parameters from transistor characteristics.

NOTE: Students should perform at least 7 out of 9 experiments.

Additional Lab experiments/practicals will be performed based on the course contents requirements.

CLASS: B.E 3RD SEMESTER

BRANCH: INFORMATION TECHNOLOGY

COURSE TITLE: PC HARDWARE AND MAINTAINANCE LAB. CREDIT:1

COURSE NO.: PIT-312

DURATION OF EXAM: 3HRS

 $\begin{array}{cccc} & & & MARKS \\ L & T & P & PRACTICAL \\ 0 & 0 & 2 & 50 \end{array}$

COURSE OUTCOMES After Completion of this course the student will be able to: -		
CO1	Install, configure, optimize and upgrade the portable personal computer.	
CO2	Perform routine maintenance and upgrade of the computer system.	
CO3	Identify the existing configuration of the computers and peripherals.	
CO4	Define input and output characteristics of different configurations of transistors.	
CO5	Perform diagnostic procedures and troubleshooting techniques to personal computer.	

Lab Experiments:

Experiment1	Study of keyboard- Mechanical Keyboard & Membrane Keyboards
Experiment2	Study of Printers a)Dot-Matrix Printers b) Inkjet Printers
Experiment3	Study of SMPS
Experiment4	Assembling the Units of Computer
Experiment5	Fault finding in the various units of Computer, Fault finding Codes & Beeps.
Experiment6	Software loading at different platforms such DOS, Windows- 95/98/2000
Experiment7	Use of Antivirus Software

<u>NOTE</u>: Additional Lab experiments/practicals will be performed based on the course contents requirements.

3rd Semester Examination to be held in the Year December 2019, 2020, 2021, 2022

CLASS: B.E 3RD SEMESTER

BRANCH: INFORMATION TECHNOLOGY CREDIT: 1

COURSE TITLE: MooC COURSE NO.: MOC-314

MARKS
L T P PRACTICAL
0 0 2 50

MooCs: A massive open online course (MooC) is a model for delivering learning content to any person who wants to take a course by means of the web. It has been incorporated in the 3rd semester. To evaluate a MooCs course following is the scheme proposed:

Breakup of Marks:

• Attendance- 10 marks

Students will have to visit the lab twice a week as per the time table and pursue their respective online course.

• Report file-15marks

A detailed report of about 20-25 pages has to be submitted to the department at the end of the semester. It should contain details about the course that was undertaken by the student. A copy of the assignments with solutions that have been uploaded on the MooC platform should also be included in the final report. A copy of the certificate if awarded should also be appended to thereport.

• Presentation- 15 marks.

The presentation should be given to the peers/students focusing on the key points of the course with an aim to share the knowledge.

• Certification- 10 marks

The students awarded with the certificate will be given 10 marks. (Copy to be attached in the report.)

The students can opt for a choice of MooC from the list provided hereunder: -

- 1. C#
- 2. WebDevelopment
- 3. Python
- 4. PHP
- 5. Android
- 6. Programming using MATLAB
- 7. JavaScriptBasics
- 8. Client ServerCommunication
- 9. Web SecurityFundamentals
- 10. SQL

But not limited to this. Students can opt for a course other than in the above list after approval from the Department.

3rd Semester Examination to be held in the Year December 2019, 2020, 2021, 2022

CLASS: B.E. 3RD SEMESTER

BRANCH: INFORMATION TECHNOLOGY
COURSE TITLE: INTERNET OF THING

COURSE No: NCC-302

L T P THEORY
2 0 0 Satisfactory/Unsatisfactory

COURSE OUTCOMES		
At the end (At the end of the course the student will be able to: -	
CO1	Explain what Internet of Things is.	
CO2	Describe key technologies in Internet of Things.	
CO3	Explain resource management in the Internet of Things.	
CO4	Understand business models for the Internet of Things.	

Detailed Syllabus

Unit I: Introduction

What is the Internet of Things?: History of IoT, About IoT, Overview and Motivations, Examples of Applications, Internet of Things Definitions and Frameworks: IoT Definitions, IoT Architecture

Unit II: Fundamental IOT Mechanisms and Key Technologies

Identification of IoT Objects and Services, Structural Aspects of the IoT, Key IoT Technologies

Unit III: Business Models For The Internet Of Things

Business Models and Business Model Innovation, Business Model Scenarios for the Internet of Things.

Unit IV: Internet of Things Application

Smart Metering Advanced Metering Infrastructure, e-Health Body Area Networks, City Automation, Automotive Applications, Home Automation, Smart Cards

NOTE: This is a Mandatory Non-Credit Course. Two objective papers will be conducted internally by the department. The students are required to score at least 40% or above in totality to be considered qualified in the course.

Books Recommended:

1. Building the Internet of Things with IPv6 and MIPv6 Daniel Minoli

2. Architecting the Internet of Things Bernd Scholz, Reiter, Florian Michahelles

3. Identity Management for Internet of Things Parikshit N. Mahalle&Poonam N. Railkar

COURSE TITLE:MANAGEMENT ACCOUNTING AND L T P MARKS

FINANCE Theory Sessional COURSE NO.:HMC-401 2 1 0 100 50

DURATION OF EXAM: 3 HOURS

COURSE OUTCOMES					
At the end of the	At the end of the course the student will be able to: -				
CO1 Understand the concepts and techniques of accounting and finance					
CO2	CO2 Understand ,analyzing and interpret basic tools of financial statements.				
CO3	Enhance skills in utilizing the accounting and financial information in the process of managerial decision-making and control.				
CO4	Gain knowledge about budget control and the concept of marginal costing.				

Detailed Syllabus Section - A

Introduction

Management Accounting-Meaning and Definition, Characteristics, Objectives, Scope, functions, advantages and imitation. Tools and Techniques of Management Accounting. Management Accountant: functions and duties. Financial Accounting -meaning and functions. (8 Hrs)

Financial Statement Analysis

Introduction-meaning, objective and types of financial statement. Methods of financial statement Analysis-MultistepIncome statement, Horizontal analysis, Common sized analysis, Trend analysis. (6Hrs)

Ratio Analysis

Ratio Analysis- meaning and rationale, advantages and limitations. Types of ratios: Liquidity Ratios, Solvency Ratios, Profitability Ratios, Efficiency Ratios. (6Hrs)

Section – B

Funds Flow and Cash Flow Statement

Meaning of Fund flow statement- Uses of fund flow statement. Difference between Funds Flow Statement and Income Statement. Meaning of Cash flow statement. Difference between Cash Flow Analysis and Funds Flow Analysis. Utility of Cash Flow Analysis. Limitation of Cash Flow Analysis. (8 Hrs)

Marginal Costing and Break-Even Analysis

Definition and characteristics of Marginal costing, Marginal cost equation, Profit/Volume Ratio, Cost- Volume-Profit Analysis, Break Even Analysis- Algebraic method. (6Hrs)

Budgetary Control

Meaning, purpose and components of effective budget programme, types of budgets, Zero Base Budgeting.

(6Hrs)

Books Recommended:

1. Management Accounting R.N Anthony, G.A, Walsh

2. Management Accounting M.Y Khan, K.P Jain:

3. Management Accounting R.K. Sharma and Shashi K. Gupta

4. Financial Management Pandey I.M

<u>NOTE</u>: There will be eight questions of 20 marks each, four from each section. Students are required to attempt five questions selecting at least two questions from each section. Use of Calculator is allowed.

CREDITS: 4

MARKS
Theory Sessional
3 1 0 100 50

COURSE OUTCOMES			
At the end of the co	ourse the student will be able to: -		
For a given algorithm student will be able to analyze the algorithm to determine its Time and Space Complexity and to understand its relationship with Data Structures.			
CO2	To understand basic concepts about Stacks, Queues, Lists, Trees and Graphs		
CO3	To enable them to write algorithms for solving problems with the help of various fundamental Data Structures.		
CO4	To understand and use different sorting and searching techniques and compare their performance in terms of Space and Time complexity		

Detailed Syllabus Section- A

Introduction to data structures: - Concepts of data and algorithm, Relation between Data Structure & Algorithm, Introduction to Time & Space complexity, Data types, Data Structures & Abstract data types, Representation of Arrays, Sparse matrices. (2Hrs)

Stacks and Queues: - Concept of Stacks, Operation on Stacks, Multiple stacks, Application of stacks in Infix, Postfix, Prefix, Recursion, Concept of Queues, Operation on Queues, Multiple Queues, Priority Queues, Circular Queues.

(10Hrs)

Linked Lists: - Insertion, Deletion and Traversal on Linear Linked Lists, Doubly Linked List, Circular Linked List, Linked List as Data Structure, Header nodes, Stacks & Queues using linked list, Dynamic memory management, Garbage Collection (10Hrs)

Section-B

Trees: -Binary trees and its representation using Linked list, Operations on Binary Trees, Traversal Algorithms, Applications, Threaded Binary Trees and its Traversal algorithms, Heterogeneous Binary Trees, List representation using Binary Trees, Optimum Search Trees, AVL trees. (10Hr)

Graphs: -Representation of Graphs, Traversal methods, Applications Undirected Graphs, Directed Graph& their Traversal, Depth first, Breadth First, Shortest Path algorithms (Dijkstra and Floyd), Minimum Cost Spanning tree (Primand Kruskal). (8Hrs)

Sorting & Searching: -

- 1. Exchange Sort (Bubble, Quicksort)
- 2. Selection &TreeSorting.
- 3. Insertion sort, Shell Sort, Address Calculation Sort
- 4. Merge &RadixSort.
- 5. Sequential Searching, searching an Ordered Table, Index sequential search, Binarysearch, Interpolation search, Tree searching (5Hrs)

Books Recommended:

1 Data Structure using C Tenenbaum, Langsam, Augenstein

2 Fundamentals of data structures Horowiz E. and Sahni S.

3 Data structures and Program Design Robert L. Kruse.

4 Data Structures & Algorithm Aho, Hopcraft and Ullman.

5 Data Structure with Applications Sorenson.

NOTE: There will be eight questions of 20 marks each, four from each section. Students are required to attempt five questions selecting at least two questions from each section. Use of Calculator is allowed.

At the end of the course the student will be able to: -			
CO1	Understand the system development life cycle		
CO2	Understand various tools of structured design		
CO3	Analyse System Threats and disaster recovery		
CO4	Understand quality assurance and system control		

Detailed Syllabus

Section - A

Systems concept: Definition, Characteristics, Elements and Types of system, System Development life cycle. Role of System Analyst. (06 Hrs)

 $\begin{tabular}{ll} System Analysis: System planning and initial investigation, information gathering tools, Feasibility Study and its importance, Cost Benefit Analysis. \end{tabular} \begin{tabular}{ll} (06Hrs) \end{tabular}$

SystemDesign:Introduction,Methodology,Toolsforstructureddesign-DataFlowDiagrams, Flowcharts, Structure Charts, Decision Tree, Decision Table, Structured English, Data Dictionary. (08 Hrs)

Section-B

SystemTesting:TestPlan,Activitynetworkforsystemtesting.DocumentationTools used in SDLC

(06 Hrs)

SystemSecurity: Introduction, ThreatstoSystem, ControlMeasures, DisasterRecovery, Audit Trails, RiskManagement (08 Hrs)

Case study of the following systems:

Library Management System, University Management System.

(06 Hrs)

Books Recommended:

1. Elements of System Analysis

- 2. System Analysis and Design
- 3. ModernSystemsAnalysis&Design
- 4. SSAD: System Software Analysis and Design

MarvinGoreandJohnW.Stubbe.

At the end of	At the end of the course the student will be able to: -		
CO1	Understand operating system structure		
CO2	Analyze the various process scheduling schemes		
CO3	Understand the concept of deadlock		
CO4	Compare Various Memory Management Schemes		
CO5	Understand system threats and need of security		

Detailed Syllabus

Section-A

Introduction Operating System- objectives, functions, services and components. The Evolution of Operating Systems, - Batch, Interactive, time-sharing and real time systems. Concepts of Multitasking, multiprogramming, buffering, spooling.

(3 Hrs) (3 Hrs)

Operating System Structure System components, operating system service, System structure.

Concurrent Processes Concept of a Process, Inter processes Communication, Process generation, Process scheduling. Principles of concurrency. The Producer/consumer problem, The critical section problem, Semaphores, Classical problems in concurrency.

(6 Hrs)

CPU Scheduling Scheduling concepts, Performance Criteria, Scheduling algorithms, Algorithm Evaluation, Multiprocessor scheduling. (5 Hrs)

DeadLocks System model, Deadlock Characterization.Prevention, avoidance and detection. Recovery from deadlock, Combined approach. (5Hrs)

Section-B

Memory Management

Base machine, Resident Monitor, Multiprogramming with fixed partitions. Multiprogramming with variable partitions.

Multiple Base Registers. Paging, Segmentation, Page segmentation, Virtual Memory concept, Demand

Paging, Performance, Page Replacement algorithms, Allocation of frames, Thrashing, Cache memory organization impact on performance. (10Hrs)

I/O Management & Disk Scheduling

I/O Devices and the organization of I/O function, I/O Buffering, Disk I/O Operating System Design Issues. (4Hrs)

File System

File Concept-File organization and Access mechanism, File Directories, File Sharing, Implementation issues. (3Hrs)

Protection & security

Introduction to security, Protection- Goals of protection, Domain of protection, Access & rights. Security & threats-the problems of security, authentication, program threats, System threats, Threat monitoring. (3Hrs)

Books Recommended:

1.	Operating System: Concept & Design	Milenkovic M
2.	Operating System Design & Implementation	Tanenbaum, A.S.
3.	Operating System Concepts	Silbersehatz A. and Peterson, J.L.
4.	Operating Systems	Stalling, Willam
5.	An Introduction to operating Systems	Dietel, H.N.

<u>NOTE</u>: There will be eight questions of 20 marks each, four from each section. Students are required to attempt five questions selecting at least two questions from each section. Use of Calculator is allowed.

COURSE NO. :PIT-404 Theory Sessional DURATION OF EXAM: 3 HOURS 2 1 0 100 50

COURSE OUTCOMES				
At the end of the	At the end of the course the student will be able to: -			
CO1 Understand the concepts of Object-Oriented Programming paradigm and platform portability in Java				
CO2	Apply concepts of Classes, Objects and Methods to tackle real world problems.			
CO3	Analyze errors and exceptions by using Exception Handling mechanism.			
CO4	Examine the Multithreading techniques by extending Thread class and develop interface, Applets and Web pages			
CO5	Create Graphic User Interface using Abstract Window Toolkit			

<u>Detailed Syllabus</u> Section – A

Java Evolution, And Overview of Java Language: Java HistoryóFeatures of java, how java different from C and C++, Java and World Wide Web, Web Browser. Java Environment: Java Development kit (JDK), Application Programming Interface (API). Java Programming Structure, Java Tokens, Constants, Variables, Expressions, Decision Making Statements and Looping, Java Statements, Overview of Arrays and Strings, Machine Neutral, Java Virtual Machine (JVM), Command Line Arguments. (6Hrs)

Arrays and Strings: Arrays, One-Dimensional arrays, Creating an Array, declaration of arrays, initialization of arrays, Two-Dimensional arrays, String methods, String Buffer class, Vectors, Wrapper classes.(4Hrs) Classes, Objects and Methods: Introduction, defining a class, creating objects, accessing class members, constructors, methods overloading, static members. (4Hrs)

Inheritance: Defining a sub class, sub class constructor, multilevel variables, Final classes, and Finalize methods, Abstract methods and classes, visibility control. (4 Hrs)

Managing Errors and Exceptions: Introduction, Types of Errors-Compile time and Run time errors, Exceptions, Types of Exceptions, Syntax of Exception handling code, Multiple catch statements, using finally statement, Throwing our own exceptions. (4 Hrs)

Section- B

Multithreaded Programming: Introduction to threads, Creating Threads, Extending the Thread Class, Implementing the Runnable interface, life cycle of a thread, priority of a thread, synchronization, Deadlock.(6Hrs)

Interfaces and Applet Programming: Introduction, defining interfaces, extending interfaces, implementing interfaces. Introduction, how applet differ from applications, building applet code, applet life cycle, About HTML, designing a web page, passing parameters to applets, getting input from the User. **(6Hrs)**

Graphics Programming: Introduction, the Abstract Windowing Toolkit (AWT), frames, event-driven programming, layout managers, panels, canvasses, drawing geometric figures. Creating User Interface: Introduction, describe various user interface Components: button, label, text field, text area, choice, list, check box checkbox group. (8Hrs)

Books Recommended:

1 Programming with JAVA
2 An Introduction to JAVA Programming
3 The Complete Reference JAVA 2

Balagurusamy TMH
Y.DanielLiangTMH
Herbert Schield TMH

COURSE TITLE: DIGITAL ELECTRONICS L T P MARKS

COURSE NO.: PIT-405

THEORY SESSIONAL

DURATION OF EXAM: 3 HOURS

2 1 0 100 50

COURSE OUTCOMES At the end of the course the student will be able to: -			
CO1	CO1 Understand the basics of number systems, logic Gates, Boolean laws & theorems.		
CO2	Apply methods to simplify the Boolean functions to the minimum number of literals.		
CO3	CO3 Design different types of combinational logic circuits using Logic gates.		
CO4	Implement different types of sequential logic circuits using Flip Flops.		
CO5	Construct different types of Counters and registers.		

Detailed Syllabus Section A

Digital Systems and Binary Numbers

Binary numbers, Number óBase Conversions, Arithmetic operations using number system, Data Representation - fixed and floating, Complements (1 s and 2 s), Binary codes ó weighted/non-weighted codes, BCD codes, Excess- 3-code, Grey codes, Conversion between codes, Code convertors Codes for error detection and correction (Hamming code). (12Hrs)

Boolean algebra and Logic Simplification:

Boolean Algebra, Logical gates, Simplification of Boolean function using Boolean algebra, Karnaugh map (up to five variables), QuineMcclusky Methods, Combinational Logic design -Half and Full adders, Half and full Subtractor, BCD Adder, Comparators. (11Hrs)

Section-B

Combinational circuits: Decoders, Encoders, Multiplexers, De-Multiplexers, Programmed logic devicesó Read only memory, Programmable Read only Memories (PROM) and Programmable Logic Arrays (PLA), Programmable Array Logic(PAL). (10Hrs)

Sequential logic design: Latches and Flip flops, conversion between flip flops, Shift Registers, Analysis of synchronous and asynchronous counters, Design of Sequential logic circuits, State Reduction and Assignment, ASM Charts.

(10Hrs)

Books Recommended:

1 Digital Design Morris Man		Morris Mano
2	Digital Electronics	R.P Jain
3	Digital Logic Design	J.P. Hayes
4	Digital Logic Design	Brain Holdsworth
5	Digital Electronics & Circuits Design	Thomas Mac calla
6	Digital Electronics	R.K Gour

<u>NOTE:</u> There will be eight questions of 20 marks each, four from each section. Students are required to attempt five questions selecting at least two questions from each section. Use of Calculator is allowed.

L T P PRACTICAL 0 0 2 50

COURSE OUTCOMES After Completion of this course the student will be able to: -		
CO1	Understand various Java Tokens, Constants, Variables, Expressions, Decision Making and Looping Statements in java.	
CO2	Implement the concepts for creating Arrays and Strings objects in java.	
CO3	Implement the concept of constructor, Destructor, Static member method overloading and multithreading in java.	
CO4	Manage Errors and Exceptions using Exception handling mechanism and code to implement interfaces and applets.	
CO5	Design window frame using various GUI components like Buttons, Text fields, menu, check list and check boxes.	

Lab Experiments:

Experiment 1	WAP To use different arithmetic operation in java.
Experiment2	WAP To demonstrate wrapper class in java.
Experiment3	WAP to perform manipulation on strings in java.
Experiment4	WAP to demonstrate single inheritance in java.
Experiment5	WAP to demonstrate multiple inheritance using interface in java
Experiment6	WAP to demonstrate Exception handling in java
Experiment7	WAP to check whether the entered amount is is sufficient or not ,if not raise an exception in java
Experiment8	WAP to demonstrate threads in java.
Experiment9	WAP to demonstrate APPLET in java.
Experiment10	WAP to demonstrate event handling in java.

NOTE: Additional Lab experiments/practicals will be performed based on the course contents requirements.

CLASS: B.E. 4TH SEMESTER CREDIT: 1

BRANCH: INFORMATION TECHNOLOGY COURSE TITLE: DIGITAL ELECTRONICS LAB.

COURSE NO. :PIT-414

 $\begin{array}{cccc} & & & MARKS \\ L & T & P & PRACTICAL \\ 0 & 0 & 2 & 50 \end{array}$

COURSE OUTCOMES After Completion of this course the student will be able to: -		
CO1	Implement logic gates and realization of OR, AND, NOT AND XOR Functions using universal gates.	
CO2	Design and implement combinational circuits like half adder/full adder, half subtractor/full subtraction, code converters, comparators, MUX/DEMUX.	
CO3	Design and implement sequential circuits like flip-flops, counters and shift registers.	

Lab Experiments:

Experiment 1	Verification of truth table of basic gates.
Experiment2	Verification of truth tables of ADDER/SUBTRACTER using IC-7483
Experiment3	Verification of truth tables of MULTIPLEXER/DEMULTIPLEXER
Experiment4	Verification of truth tables of BCD 67- Segment Display
Experiment5	Verification of truth tables of Code Conversion.
Experiment6	Design of Flip-Flops using IC chips
Experiment7	Design of Twos complement circuits using shift registers
Experiment8	Design and Implementation of Asynchronous MOD-12 counters.
Experiment9	Design of a sequential circuit
Experiment10	Study of PLA'S and PAL's.

<u>NOTE</u>: Each student has to perform at least 8 experiments out of which 40% shall be simulation based. Additional Lab experiments/practicals will be performed based on the course contents requirements
